

Choose our

Reference Data Processing and join the data management

Reference data management is essential for our customers to manage supplier and customer payment information. However, the data can be found in different sources and code sets.

With our Reference Data Processing solution, the obstacle of various sources is eliminated and data can be browsed and exported from one central web user interface.

Import

of reference data from structured files via Web-Service

Browsing

reference data via the Web user interface with different filter options

Export

of reference data via Web user interface scheduler

Reference Data

Reference data are found in almost every organization with a growing amount in the last years. They include among others lists, lookup values, and code data tables. Reference data management is needed to ensure data quality for transactions and compliance reasons.

Our Solution

Our Reference Data Processing solution is developed together with our customer according to customer-specific needs. The solution helps you to manage your reference data to ensure data quality. Your data is safeguarded in our solution and can be processed using full history management. Changes in the data are carried out using the secure four-eye principle. Via the Web user interface, you are able to browse and export your reference data. Using the WebService, you are able to import reference data.

Data Change
in the Web user interface using a four-eye principle

Full history management
of selected data sets

Handling
of user and role privileges

Development
of reference data processing solution according to company-specific needs
